Important information about the electrical connection of the UECT Meppel campsite

All plugs for connection to the UECT campsite electricity network will be made with the normal/usual Netherlands plug block system, see picture below.

All owners of motorhomes, caravans or tents must use this type of connection.

It will therefore be imperative to have a plug adapter (see image below) to connect to your electrical system (European camping standard),

The Dutch organisers inform that every owner of a motorhome, caravan or tent is responsible for having his or her own electrical connection adapter.

The electrical voltage is 220 volts.

For technical information about electrical connections, please contact the Dutch electricity manager of the UECT campsite in Meppel in English: ***Roel KLOOSTERZIEL*** - Email roel@kloosterziel.nl
